Experience

Optaros   **Associate Developer**

Optaros is an eCommerce Solutions company.   July 2013 - Present | Austin, Texas

➤ Primary developer overseeing two clients, client facing role interacting with projects' main points of contact for daily project updates and on call as needed to resolve issues expediently on both Optaros and client hosted servers; responsible for implementing security and feature enhancements; client facing role interacting with projects' main points of contact for daily project updates and on call as needed to resolve issues expediently on both Optaros and client hosted servers.

➤ Automated formerly manual process for increased efficiency in finding products with missing data by a script run by a recurring cron job. Increased efficiency by about 10 hours monthly for both client and Optaros developers

➤ Coordinate efforts with several cross-functional teams of developers and project management for 5 projects, responsible for feature implementation and client support; use Git, Vagrant, and Virtual Box as tools for development.

➤ Identified and corrected defect in file processing of non-ascii characters ensuring successful data transfer, deployed solution via Websphere application server.

➤ Developed a plan for troubleshooting pharmaceutical company's payment processing methods ensuring non-corrupted payment data transfer through Oracle scripts.

➤ Designed and implemented a custom module for downloading a collection of documents using Drupal API and Drush - Drupal's command-line utility; module used for bulk download of documents used by pharmaceutical companies searching for medical documentation.

➤ Added Salesforce integration functionality restricting specific entity types from being synced to and from the Salesforce instance, maintained with Drupal's Features module.

➤ Organized and presented overview of Magento Catalog section to train and prepare 15 coworkers for Magento certification exams. Of the 10 who have taken the exam, 10 have passed.

➤ Managed Git repositories via command line and Atlassian Fisheye browser view.

➤ Primary technologies: Drupal 7 and 6, PHP, Java, Vagrant, Git, MySQL, SQL, Magento, HTML/CSS, Hybris

➤ Organize events for office planning team including: potlucks, and happy hours for the office.

uShip.com   **Intern, Development**

uShip is a tool to facilitate shipping worldwide.   January 2013 - May 2013 | Austin, Texas

➤ Researched and implemented improvements to style sheets for responsive functionality of uShip.com's booking process and to enhance user experience tested changes with Selenium testing suite.

➤ Worked with a development team of 5 developers, using Mercurial repositories for deployment; team followed highly agile development methodology and continuous deployment for software delivery.
